

AIRPORT CARBON ACCREDITATION POLICY STATEMENT

Providing an exceptional guest experience is a core principle of Manchester-Boston Regional Airport. This necessitates that we understand our guests' expectations and that we commit to meeting or exceeding those expectations. Our guests, and our community, expect an airport operation that both recognizes its impact on the environment and strives to protect it for future generations to enjoy. We want our guests to know that when they Fly Manchester, they are choosing an airport dedicated to environmental stewardship.

Through the pursuit of a Level 1 Airport Carbon Accreditation, we are embarking on a journey with our guests and business partners that will lead to an airport operation that embraces methods that are socially responsible and economically sound. We commit to further demonstrate our dedication to reducing our carbon footprint by maintaining our carbon accreditation efforts.
